## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1, 2, 4-11, and 13-21 are allowed.

Regarding Claim 1, Jalali and Zirwas do not teach, alone nor in combination, transmitting a plurality of versions of the radio signal having different polarizations from a first station to a second station; and adaptively controlling respective transmission powers of said versions of the radio signal according to measurements carried out by the first station on signals transmitted by the second station, wherein an optimal transmission power distribution of the radio signal between the polarizations estimated on the basis of minimizing a cost function relative to a quality of the signal received by the second station, and the transmission power is distributed between said versions of the radio signal in accordance with the estimated distribution.

Referring to Claim 10, Jalali and Zirwas do not teach, alone nor in combination, means for transmitting a plurality of versions of a radio signal having different polarizations to a remote radiocommunication station, means for measuring parameters on the basis of signals transmitted by said remote station, and means for adaptively controlling the respective transmission powers of said versions of the radio signal according to said measured parameters, wherein the means for adaptively controlling the transmission powers comprise means for estimating an optimal distribution of the transmission power of the signals between the polarizations, on the basis of minimizing a cost function relating to the quality of the signal received by the remote station, and

means for driving the transmission means so as to distribute the transmission power between said polarizations according to the estimated distribution.
